

CLEANING AND MAINTENANCE GUIDE

ML_BSB380 ALUMINIUM ADJUSTABLE BENCH SEAT BRACKET

KEEPING METLAM AUSTRALIA ALUMINIUM PRODUCT CLEAN

- * Metlam Aluminium Products look best if it's cleaned regularly with a damp cloth.
- * Drying afterwards makes sure streaky marks aren't left behind.
- * Routine cleaning prevents any stubborn stains building up.

WHAT TO USE

For day to day cleaning fresh water, mild detergent and a cloth is all that is required.

Do not use bleach – it's just too easy to make the solution too strong making it difficult to properly rinse it off the surface afterwards. After cleaning, wipe the surface dry with a soft absorbent cloth.

AVOID SCRATCHES

Metlam Aluminium Products can be scratched by careless handling or aggressive scrubbing.

Avoid dragging rough items across the surface and be aware that grit, trapped under other materials, can actually cause surface scratches.

CHEMICAL REACTION

If left in contact with corrosive agents for extended periods, Metlam Aluminium products may be compromised. Applying a regular maintenance/cleaning schedule as outlined above using only fresh water, will minimise any potential problems.

Note: Chlorine has a corrosive effect on aluminium, therefore a minimum 2 metre distance from chlorinated water is highly recommended for leisure centre/ swimming pool projects. Further, janitorial/cleaning staff should note that washing down this product with chlorinated water would contribute to its loss of integrity. Any corrosion from chlorinated water would void the [Metlam Australia Warranty](#).

DO NOT

- * Rub with steel wool (wire wool) or scraping with steel tools
- * Use scourers and cleaning cloths that have been used on ordinary steel
- * Rub plastic scourers across the grain of brushed surfaces
- * Use concentrated bleach or hydrochloric acid-based cleaning products
- * Use products with chlorine bleach, hydrochloric or muriatic acid
